2. Given to reflection or serious consideration; reflective; contemplative; as, a reflecting mind. Reflecting circle, an astronomical instrument for measuring angless, like the sextant or Hadley's quadrant, by the reflection of light from two plane mirrors which it carries, and differing from the sextant chiefly in having an entire circle.
 -- Reflecting galvanometer, a galvanometer in which the deflections of the needle are read by means of a mirror attached to it, which reflects a ray of light or the image of a scale; -- called also mirror galvanometer.
 -- Reflecting goniometer. See under Goniometer.
 -- Reflecting telescope. See under Telescope.

REFLECTINGLY
Re*flect"ing*ly, adv.

Defn: With reflection; also, with censure; reproachfully. Swift.

REFLECTION
Re*flec"tion (r*flk"shn), n. Etym: [L. reflexio: cf. F. rÈflexion. See Riflect.] [Written also reflexion.]

1. The act of reflecting, or turning or sending back, or the state of being reflected. Specifically:
(a) The return of rays, beams, sound, or the like, from a surface. See Angle of reflection, below.
The eye sees not itself, But by reflection, by some other things. Shak.

(b) The reverting of the mind to that which has already occupied it; continued consideration; meditation; contemplation; hence, also, that operation or power of the mind by which it is conscious of its own acts or states; the capacity for judging rationally, especially in view of a moral rule or standard.
By reflection, . . . I would be understood to mean, that notice which the mind takes of its own operations, and the manner of them, by reason whereof there come to be ideas of these operations in the understanding. Locke.
This delight grows and improves under thought and reflection. South.

2. Shining; brightness, as of the sun. [Obs.] Shak.

3. That which is produced by reflection. Specifically:
(a) An image given back from a reflecting surface; a reflected

counterpart.
As the sun water we can bear, Yet not the sun, but his reflection, there. Dryden.

(b) A part reflected, or turned back, at an angle; as, the reflection of a membrane.
(c) Result of meditation; thought or opinion after attentive consideration or contemplation; especially, thoughts suggested by truth.
Job's reflections on his once flourishing estate did at the same time afflict and encourage him. Atterbury.

4. Censure; reproach cast.
He died; and oh! may no reflection shed Its poisonous venom on the royal dead. Prior.

5. (Physiol.)

Defn: The transference of an excitement from one nerve fiber to another by means of the nerve cells, as in reflex action. See Reflex action, under Reflex. Angle of reflection, the angle which anything, as a ray of light, on leaving a reflecting surface, makes with the perpendicular to the surface.
-- Angle of total reflection. (Opt.) Same as Critical angle, under Critical.

Syn.
-- Meditation; contemplation; rumination; cogitation; consideration; musing; thinking.

REFLECTIVE
Re*flect"ive (r*flkt"v), a. Etym: [Cf. F. rÈflectif. Cf. Reflexive.]

1. Throwing back images; as, a reflective mirror.
In the reflective stream the sighing bride, viewing her charms. Prior.

2. Capable of exercising thought or judgment; as, reflective reason. Prior.
His perceptive and reflective faculties . . . thus acquired a precocious and extraordinary development. Motley.

3. Addicted to introspective or meditative habits; as, a reflective person.

4. (Gram.)

Defn: Reflexive; reciprocal.
-- Re*flect"ive*ly, adv.
-- Re*flect"ive*ness, n. "Reflectiveness of manner." J. C. Shairp.

REFLECTOR
Re*flect"or (-er), n. Etym: [Cf. F. rÈflecteur.]

1. One who, or that which, reflects. Boyle.

2. (Physics)
(a) Something having a polished surface for reflecting light or heat, as a mirror, a speculum, etc.
(b) A reflecting telescope.
(c) A device for reflecting sound.

REFLET
Re*flet" (re*fle"), n. [F., reflection. See Reflect.]

Defn: Luster; special brilliancy of surface; -- used esp. in ceramics to denote the peculiar metallic brilliancy seen in lustered pottery such as majolica; as, silver reflet; gold reflet.

REFLEX
Re"flex (r"flks), a. Etym: [L. reflexus, p. p. of reflectere: cf. F. rÈflexe. See Reflect.]

1. Directed back; attended by reflection; retroactive; introspective.
The reflex act of the soul, or the turning of the intellectual eye inward upon its own actions. Sir M. Hale.

2. Produced in reaction, in resistance, or in return.

3. (Physiol.)

Defn: Of, pertaining to, or produced by, stimulus or excitation without the necessary intervention of consciousness. Reflex action (Physiol.), any action performed involuntarily in consequence of an impulse or impression transmitted along afferent nerves to a nerve center, from which it is reflected to an efferent nerve, and so calls into action certain muscles, organs, or cells.
-- Reflex nerve (Physiol.), an excito-motory nerve. See Exito-motory.

REFLEX
Re"flex (r"flks; formerly r*flks"), n. Etym: [L. reflexus a bending back. See Reflect.]

1. Reflection; the light reflected from an illuminated surface to one in shade.
Yon gray is not the morning's eye, 'Tis but the pale reflex of Cynthia's brow. Shak.
On the depths of death there swims The reflex of a human face. Tennyson.

2. (Physiol.)

Defn: An involuntary movement produced by reflex action. Patellar reflex. See Knee jerk, under Knee.

REFLEX
Re*flex" (r*flks"), v. t. Etym: [L. reflexus, p. p. of reflectere. See Reflect.]

1. To reflect. [Obs.] Shak.

2. To bend back; to turn back. J. Gregory.

REFLEXED
Re*flexed" (r*flkst"), a.

Defn: Bent backward or outward.

REFLEXIBILITY
Re*flex`i*bil"i*ty (r*flks`*bl"*t), n. Etym: [Cf. F. rÈflexibilitÈ.]

Defn: The quality or capability of being reflexible; as, the reflexibility of the rays of light. Sir I. Newton.

REFLEXIBLE
Re*flex"i*ble (r*flks"*b'l), a. Etym: [CF. F. rÈflexible.]

Defn: Capable of being reflected, or thrown back.
The light of the sun consists of rays differently refrangible and reflexible. Cheyne.

REFLEXION
Re*flex"ion (-flk"shn), n.

Defn: See Reflection. Chaucer.

REFLEXITY
Re*flex"i*ty (r*flks"*t), n.

Defn: The state or condition of being reflected. [R.]

REFLEXIVE
Re*flex"ive (-v), a.

1. Etym: [Cf. F. rÈflexif.]

Defn: Bending or turned backward; reflective; having respect to something past.
Assurance reflexive can not be a divine faith. Hammond.

2. Implying censure. [Obs.] "What man does not resent an ugly reflexive word" South.

3. (Gram.)

Defn: Having for its direct object a pronoun which refers to the agent or subject as its antecedent; -- said of certain verbs; as, the witness perjured himself; I bethought myself. Applied also to pronouns of this class; reciprocal; reflective.
-- Re*flex"ive*ly, adv.
-- Re*flex"ive*ness, n.

REFLEXIVE
Re*flex"ive, adv.

Defn: In a reflex manner; reflectively.

REFLEXLY
Re*flex"ly, adv.

Defn: In a reflex manner; reflectively.

REFLOAT
Re"float (r"flt), n.

Defn: Reflux; ebb. [Obs.] Bacon.

REFLORESCENCE
Re`flo*res"cence (r`fl*rs"sens), n. (Bot.)

Defn: A blossoming anew of a plant after it has apparently ceased blossoming for the season.

REFLOURISH
Re*flour"ish (r*flr"sh), v. t. & i.

Defn: To flourish again.

REFLOW
Re*flow" (r*fl"), v. i.

Defn: To flow back; to ebb.

REFLOWER
Re*flow"er (re*flou"er), v. i. & t.

Defn: To flower, or cause to flower, again. Sylvester.

REFLUCTUATION
Re*fluc`tu*a"tion (r*flk`t*"shn; 135), n.

Defn: A flowing back; refluence.

REFLUENCE; REFLUENCY
Ref"lu*ence, Ref"lu*en*cy, n.

Defn: The quality of being refluent; a flowing back.

REFLUENT
Ref"lu*ent (-ent), a. Etym: [L. refluens, p. pr. of refluere to flow back; pref. re- re- + fluere to flow. See Flurent.]

Defn: Flowing back; returning; ebbing. Cowper.
And refluent through the pass of fear The battle's tide was poured.
Sir W. Scott.

REFLUEUS
Ref"lu*eus (-s), a. Etym: [L. refluus.]

Defn: Refluent. [Obs.]

REFLUX
Re"flux` (r"flks`), a.

Defn: Returning, or flowing back; reflex; as, reflux action.

REFLUX
Re"flux`, n. Etym: [F. reflux. See Refluent, Flux.]

Defn: A flowing back, as the return of a fluid; ebb; reaction; as, the flux and reflux of the tides.
All from me Shall with a fierce reflux on me redound. Milton.

REFOCILLATE
Re*foc"il*late (r*fs"l*lt), v. t. Etym: [L. refocillatus, p. p. of refocillare; pref. re- re- + focillare to revive by warmth.]

Defn: To refresh; to revive. [Obs.] Aubrey.

REFOCILLATION
Re*foc`il*la"tion (-l"shn), n.

Defn: Restoration of strength by refreshment. [Obs.] Middleton.

REFOLD
Re*fold" (r*fld"), v. t.

Defn: To fold again.

REFOMENT
Re`fo*ment" (r`f*mnt"), v. t.

Defn: To foment anew.

REFOREST
Re*for"est, v. t. [imp. & p. p. Reforested; p. pr. & vb. n. Reforesting.]

Defn: To replant with trees; to reafforest; to reforestize.

REFORESTIZATION
Re*for`est*i*za`tion (r*fr`st**z"shn), n.

Defn: The act or process of reforestizing.

REFORESTIZE
Re*for"est*ize (r*fr"st*z), v. t.

Defn: To convert again into a forest; to plant again with trees.

REFORGE

Re*forge" (r*frj"), v. t. Etym: [Pref. re- + forge: cf. F. reforger.]

Defn: To forge again or anew; hence, to fashion or fabricate anew; to make over. Udall.

REFORGER
Re*for"ger (r*fr"jr), n.

Defn: One who reforges.

REFORM
Re*form" (r*frm"), v. t. Etym: [F. rÈformer, L. reformare; pref. re- re- + formare to form, from forma form. See Form.]

Defn: To put into a new and improved form or condition; to restore to a former good state, or bring from bad to good; to change from worse to better; to amend; to correct; as, to reform a profligate man; to reform corrupt manners or morals.
The example alone of a vicious prince will corrupt an age; but that of a good one will not reform it. Swift.

Syn.
 -- To amend; correct; emend; rectify; mend; repair; better; improve; restore; reclaim.

REFORM
Re*form", v. i.

Defn: To return to a good state; to amend or correct one's own character or habits; as, a man of settled habits of vice will seldom reform.

REFORM
Re*form", n. Etym: [F. rÈforme.]

Defn: Amendment of what is defective, vicious, corrupt, or depraved; reformation; as, reform of elections; reform of government. Civil service reform. See under Civil.
 -- Reform acts (Eng. Politics), acts of Parliament passed in 1832, 1867, 1884, 1885, extending and equalizing popular representation in Parliament.
 -- Reform school, a school established by a state or city government, for the confinement, instruction, and reformation of juvenile offenders, and of young persons of idle, vicious, and vagrant habits. [U. S.]

Syn.
 -- Reformation; amendment; rectification; correction. See Reformation.

RE-FORM
Re-form" (r*frm"), v. t. & i. [imp. & p. p. Re-formed (-frmd"); p. pr. & vb. n. Re-forming.]

Defn: To give a new form to; to form anew; to take form again, or to take a new form; as, to re-form the line after a charge.

REFORMABLE
Re*form"a*ble (r*frm"*b'l), a.

Defn: Capable of being reformed. Foxe.

REFORMADE
Ref`or*made" (rf`r*md"), n.

Defn: A reformado. [Obs.]

REFORMADO

Ref`or*ma"do (-m"d), n. Etym: [Sp., fr. reformar, L. reformare. SEe Reform, v. t.]

1. A monk of a reformed order. [Obs.] Weever.

2. An officer who, in disgrace, is deprived of his command, but retains his rank, and sometimes his pay. [Obs.]

REFORMALIZE
Re*form"al*ize (r*frm"al*z), v. i.

Defn: To affect reformation; to pretend to correctness. [R.]

REFORMATION
Ref`or*ma"tion (rf`r*m"shn), n. Etym: [F. rÈformation, L. reformatio.]

1. The act of reforming, or the state of being reformed; change from worse to better; correction or amendment of life, manners, or of anything vicious or corrupt; as, the reformation of manners; reformation of the age; reformation of abuses.
Satire lashes vice into reformation. Dryden.

2. Specifically (Eccl. Hist.), the important religious movement commenced by Luther early in the sixteenth century, which resulted in the formation of the various Protestant churches.

Syn.
 -- Reform; amendment; correction; rectification.
 -- Reformation, Reform. Reformation is a more thorough and comprehensive change than reform. It is applied to subjects that are more important, and results in changes which are more lasting. A reformation involves, and is followed by, many particular reforms. "The pagan converts mention this great reformation of those who had been the greatest sinners, with that sudden and surprising change which the Christian religion made in the lives of the most profligate." Addison. "A variety of schemes, founded in visionary and impracticable ideas of reform, were suddenly produced." Pitt.

RE-FORMATION
Re`-for*ma"tion (r`fr*m"shn), n.

Defn: The act of forming anew; a second forming in order; as, the reformation of a column of troops into a hollow square.

REFORMATIVE
Re*form"a*tive (r*frm"*tv), a.

Defn: Forming again; having the quality of renewing form; reformatory. Good.

REFORMATORY
Re*form"a*to*ry (-t*r), a.

Defn: Tending to produce reformation; reformative.

REFORMATORY
Re*form"a*to*ry, n.; pl. -ries (-r.

Defn: An institution for promoting the reformation of offenders. Magistrates may send juvenile offenders to reformatories instead of to prisons. Eng. Cyc.

REFORMED
Re*formed" (r*frmd"), a.

1. Corrected; amended; restored to purity or excellence; said, specifically, of the whole body of Protestant churches originating in

the Reformation. Also, in a more restricted sense, of those who separated from Luther on the doctrine of consubstantiation, etc., and carried the Reformation, as they claimed, to a higher point. The Protestant churches founded by them in Switzerland, France, Holland, and part of Germany, were called the Reformed churches.
The town was one of the strongholds of the Reformed faith. Macaulay.

2. Amended in character and life; as, a reformed gambler or drunkard.

3. (Mil.)

Defn: Retained in service on half or full pay after the disbandment of the company or troop; -- said of an officer. [Eng.]

REFORMER
Re*form"er (r*frm"r), n.

1. One who effects a reformation or amendment; one who labors for, or urges, reform; as, a reformer of manners, or of abuses.

2. (Eccl.Hist.)

Defn: One of those who commenced the reformation of religion in the sixteenth century, as Luther, Melanchthon, Zwingli, and Calvin.

REFORMIST
Re*form"ist, n. Etym: [Cf. F. rÈformiste.]

Defn: A reformer.

REFORMLY
Re*form"ly, adv.

Defn: In the manner of a reform; for the purpose of reform. [Obs.] Milton.

REFORTIFICATION
Re*for`ti*fi*ca"tion (r*fr`t*f*k"shn), n.

Defn: A fortifying anew, or a second time. Mitford.

REFORTIFY
Re*for"ti*fy (r*fr"t*f), v. t.

Defn: To fortify anew.

REFOSSION
Re*fos"sion (r*fsh"n), n. Etym: [L. refodere, refossum, to dig up again. See Fosse.]

Defn: The act of digging up again. [Obs.] Bp. Hall.

REFOUND
Re*found" (r*found"), v. t. Etym: [Pref. re- + found to cast; cf. F. refondare. Cf. Refund.]

1. To found or cast anew. "Ancient bells refounded." T. Warton.

2. To found or establish again; to re

REFOUND
Re*found",

Defn: imp. & p. p. of Refind, v. t.

REFOUNDER
Re*found"er (-r), n.

Defn: One who refounds.

REFRACT
Re*fract" (r*fr$kt"), v. t. [imp. & p. p. Refracted; p. pr. & vb. n. Refracting.] Etym: [L. refractus, p. p. of refringere; pref. re- re- + frangere to break: cf. F. rÈfracter. SEe FRacture, and cf. Refrain, n.]

1. To bend sharply and abruptly back; to break off.

2. To break the natural course of, as rays of light orr heat, when passing from one transparent medium to another of different density; to cause to deviate from a direct course by an action distinct from reflection; as, a dense medium refrcts the rays of light as they pass into it from a rare medium.

REFRACTABLE
Re*fract"a*ble (-*b'l), a.

Defn: Capable of being refracted.

REFRACTED
Re*fract"ed, a.

1. (Bot. & Zoˆl.)

Defn: Bent backward angularly, as if half-broken; as, a refracted stem or leaf.

2. Turned from a direct course by refraction; as, refracted rays of light.

REFRACTING
Re*fract"ing, a.

Defn: Serving or tending to refract; as, a refracting medium.
Refracting angle of a prism (Opt.), the angle of a triangular prism included between the two sides through which the refracted beam passes in the decomposition of light.
-- Refracting telescope. (Opt.) See under Telescope.

REFRACTION
Re*frac"tion (r*frk"shn), n. Etym: [F. rÈfraction.]

1. The act of refracting, or the state of being refracted.

2. The change in the direction of ray of light, heat, or the like, when it enters obliquely a medium of a different density from that through which it has previously moved.
Refraction out of the rarer medium into the denser, is made towards the perpendicular. Sir I. Newton.

3. (Astron.)
(a) The change in the direction of a ray of light, and, consequently, in the apparent position of a heavenly body from which it emanates, arising from its passage through the earth's atmosphere; -- hence distinguished as atmospheric refraction, or astronomical refraction.
(b) The correction which is to be deducted from the apparent altitude of a heavenly body on account of atmospheric refraction, in order to obtain the true altitude. Angle of refraction (Opt.), the angle which a refracted ray makes with the perpendicular to the surface separating the two media traversed by the ray.
-- Conical refraction (Opt.), the refraction of a ray of light into an infinite number of rays, forming a hollow cone. This occurs when a ray of light is passed through crystals of some substances, under certain circumstances. Conical refraction is of two kinds; external conical refraction, in which the ray issues from the crystal in the form of a cone, the vertex of which is at the point of emergence; and

internal conical refraction, in which the ray is changed into the form of a cone on entering the crystal, from which it issues in the form of a hollow cylinder. This singular phenomenon was first discovered by Sir W. R. Hamilton by mathematical reasoning alone, unaided by experiment.
-- Differential refraction (Astron.), the change of the apparent place of one object relative to a second object near it, due to refraction; also, the correction required to be made to the observed relative places of the two bodies.
-- Double refraction (Opt.), the refraction of light in two directions, which produces two distinct images. The power of double refraction is possessed by all crystals except those of the isometric system. A uniaxial crystal is said to be optically positive (like quartz), or optically negative (like calcite), or to have positive, or negative, double refraction, according as the optic axis is the axis of least or greatest elasticity for light; a biaxial crystal is similarly designated when the same relation holds for the acute bisectrix.
-- Index of refraction. See under Index.
-- Refraction circle (Opt.), an instrument provided with a graduated circle for the measurement of refraction.
-- Refraction of latitude, longitude, declination, right ascension, etc., the change in the apparent latitude, longitude, etc., of a heavenly body, due to the effect of atmospheric refraction.
-- Terrestrial refraction, the change in the apparent altitude of a distant point on or near the earth's surface, as the top of a mountain, arising from the passage of light from it to the eye through atmospheric strata of varying density.

REFRACTIVE
Re*fract"ive (r*frkt"v), a. Etym: [Cf. F. rÈfractif. See Refract.]

Defn: Serving or having power to refract, or turn from a direct course; pertaining to refraction; as, refractive surfaces; refractive powers. Refractive index. (Opt.) See Index of refraction, under Index.
-- Absolute refractive index (Opt.), the index of refraction of a substances when the ray passes into it from a vacuum.
-- Relative refractive index (of two media) (Opt.), the ratio of the sine of the angle of incidence to the sine of the angle of refraction for a ray passing out of one of the media into the other.

REFRACTIVENESS
Re*fract"ive*ness, n.

Defn: The quality or condition of being refractive.

REFRACTOMETER
Re`frac*tom"e*ter (r`frk*tm"*tr), n. Etym: [Refraction + -meter.] (Opt.)

Defn: A contrivance for exhibiting and measuring the refraction of light.

REFRACTOR
Re*fract"or (r, n.

Defn: Anything that refracts; specifically: (Opt.)

Defn: A refracting telescope, in which the image to be viewed is formed by the refraction of light in passing through a convex lens.

REFRACTORILY
Re*frac"to*ri*ly (r*frk"t*r*l), adv.

Defn: In a refractory manner; perversely; obstinately.

REFRACTORINESS

Re*frac"to*ri*ness, n.

Defn: The quality or condition of being refractory.

REFRACTORY
Re*frac"to*ry (-r), a. Etym: [L. refractorius, fr. refringere: cf. F. refractaire. See Refract.]

1. Obstinate in disobedience; contumacious; stubborn; unmanageable; as, a refractory child; a refractory beast.
Raging appetites that are Most disobedient and refractory. Shak.

2. Resisting ordinary treatment; difficult of fusion, reduction, or the like; -- said especially of metals and the like, which do not readily yield to heat, or to the hammer; as, a refractory ore.

Syn.
 -- Perverse; contumacious; unruly; stubborn; obstinate; unyielding; ungovernable; unmanageable.

REFRACTORY
Re*frac"to*ry, n.

1. A refractory person. Bp. Hall.

2. Refractoriness. [Obs.] Jer. TAylor.

3. OPottery) A piece of ware covered with a vaporable flux and placed in a kiln, to communicate a glaze to the other articles. Knight.

REFRACTURE
Re*frac"ture (r*frk"tr;135), n. (Surg.)

Defn: A second breaking (as of a badly set bone) by the surgeon.

REFRACTURE
Re*frac"ture, v. t. (Surg.)

Defn: To break again, as a bone.

REFRAGABLE
Ref"ra*ga*ble (rf"r*g*b'l), a. Etym: [LL. refragabilis, fr. L. refragari to oppose.]

Defn: Capable of being refuted; refutable. [R.] --
Ref"ra*ga*ble*ness, n. [R.] -- Ref`*ra*ga*bil"i*ty (-b, n. [R.]

REFRAGATE
Ref"ra*gate (-gt), v. i. Etym: [L. refragatus, p. p. of refragor.]

Defn: To oppose. [R.] Glanvill.

REFRAIN
Re*frain" (r*frn"), v. t. [imp. & p. p. Refrained (-frnd"); p. pr. & vb/ n. Refraining.] Etym: [OE. refreinen, OF. refrener, F. refr, fr. L. refrenare; influenced by OF. refraindre to restrain, moderate, fr. LL. refrangere, for L. refringere to break up, break (see Refract). L. refrenare is fr. pref. re- back + frenum bridle; cf. Skr. dh to hold.]

1. To hold back; to restrain; to keep within prescribed bounds; to curb; to govern.
His reson refraineth not his foul delight or talent. Chaucer.
Refrain thy foot from their path. Prov. i. 15.

2. To abstain from [Obs.]
Who, requiring a remedy for his gout, received no other counsel than to refrain cold drink. Sir T. Browne.

REFRAIN
Re*frain", v. i.

Defn: To keep one's self from action or interference; to hold aloof; to forbear; to abstain.
Refrain from these men, and let them alone. Acts v. 38.
They refrained therefrom [eating flesh] some time after. Sir T. Browne.

Syn.
 -- To hold back; forbear; abstain; withhold.

REFRAIN
Re*frain", n. Etym: [F. refrain, fr. OF. refraindre; cf. Pr. refranhs a refrain, refranher to repeat. See Refract,Refrain, v.]

Defn: The burden of a song; a phrase or verse which recurs at the end of each of the separate stanzas or divisions of a poetic composition.
We hear the wild refrain. Whittier.

REFRAINER
Re*frain"er (r*frn"r), n.

Defn: One who refrains.

REFRAINMENT
Re*frain"ment (-ment), n.

Defn: Act of refraining. [R.]

REFRAME
Re*frame" (r*frm), v. t.

Defn: To frame again or anew.

REFRANGIBILITY
Re*fran`gi*bil"i*ty (r*frn`j*bl"*t), n. Etym: [Cf. F. rÈfrangibilitÈ.]

Defn: The quality of being refrangible.

REFRANGIBLE
Re*fran"gi*ble (-frn"j*b'l), a. Etym: [Cf. F. rÈfrangible. See Refract.]

Defn: Capable of being refracted, or turned out of a direct course, in passing from one medium to another, as rays of light.
 -- Re*fran"gi*ble*ness, n.

REFRENATION
Ref`re*na"tion (rf`r*n"shn), n. Etym: [L. refrenatio. See Refrain, v. t.]

Defn: The act of refraining. [Obs.]

REFRESH
Re*fresh" (r*frsh"), v. t. [imp. & p. p. Refreshed (-frsht"); p. pr. & vb. n. Refreshing.] Etym: [OE. refreshen, refreschen, OF. refreschir (cf. OF. rafraischir, rafreschir, F. rafra); pref. re- re- + fres fresh. F. frais. See Fresh, a.]

1. To make fresh again; to restore strength, spirit, animation, or the like, to; to relieve from fatigue or depression; to reinvigorate; to enliven anew; to reanimate; as, sleep refreshes the body and the mind. Chaucer.
Foer they have refreshed my spirit and yours. 1 Cor. xvi. 18.
And labor shall refresh itself with hope. Shak.

2. To make as if new; to repair; to restore.
The rest refresh the scaly snakes that folDryden.
To refresh the memory, to quicken or strengthen it, as by a reference, review, memorandum, or suggestion.

Syn.
-- To cool; refrigerate; invigorate; revive; reanimate; renovate; renew; restore; recreate; enliven; cheer.

REFRESH
Re*fresh", n.

Defn: The act of refreshing. [Obs.] Daniel.

REFRESHER
Re*fresh"er (-r), n.

1. One who, or that which, refreshes.

2. (Law)

Defn: An extra fee paid to counsel in a case that has been adjourned from one term to another, or that is unusually protracted.
Ten guineas a day is the highest refresher which a counsel can charge. London Truth.

REFRESHFUL
Re*fresh"ful (-fl), a.

Defn: Full of power to refresh; refreshing.
-- Re*fresh"ful*ly, adv.

REFRESHING
Re*fresh"ing, a.

Defn: Reviving; reanimating.
-- Re*fresh"ing*ly, adv.
-- Re*fresh"ing*ness, n.

REFRESHMENT
Re*fresh"ment (-ment), n. Etym: [CF. OF. refreschissement, F. rafraÓchissement.]

1. The act of refreshing, or the state of being refreshed; restoration of strength, spirit, vigor, or liveliness; relief after suffering; new life or animation after depression.

2. That which refreshes; means of restoration or reanimation; especially, an article of food or drink.

REFRET
Re*fret" (r*frt"), n. Etym: [OF. refret, L. refractus, p. p. See Refrain, n., Refract.]

Defn: Refrain. [Obs.] Bailey.

REFREYD

Coleridge.
According to General Livingston's humorous account, his own village of Elizabethtown was not much more reliable, being peopled in those agitated times by "unknown, unrecommended strangers, guilty-looking Tories, and very knavish Whigs." W. Irving.

Note: Some authors take exception to this word, maintaining that it is unnecessary, and irregular in formation. It is, however, sanctioned by the practice of many careful writers as a most convenient substitute for the phrase to be relied upon, and a useful synonym for trustworthy, which is by preference applied to persons, as reliable is to things, such as an account, statement, or the like. The objection that adjectives derived from neuter verbs do not admit of a passive sense is met by the citation of laughable, worthy of being laughed at, from the neuter verb to laugh; available, fit or able to be availed of, from the neuter verb to avail; dispensable, capable of being dispensed with, from the neuter verb to dispense. Other examples might be added.

RELIGION
Re*li"gion (r-lj"n), n. Etym: [F., from L. religio; cf. religens pious, revering the gods, Gr. Neglect.]

1. The outward act or form by which men indicate their recognition of the existence of a god or of gods having power over their destiny, to whom obedience, service, and honor are due; the feeling or expression of human love, fear, or awe of some superhuman and overruling power, whether by profession of belief, by observance of rites and ceremonies, or by the conduct of life; a system of faith and worship; a manifestation of piety; as, ethical religions; monotheistic religions; natural religion; revealed religion; the religion of the Jews; the religion of idol worshipers.
An orderly life so far as others are able to observe us is now and then produced by prudential motives or by dint of habit; but without seriousness there can be no religious principle at the bottom, no course of conduct from religious motives; in a word, there can be no religion. Paley.
Religion [was] not, as too often now, used as equivalent for godliness; but . . . it expressed the outer form and embodiment which the inward spirit of a true or a false devotion assumed. Trench.
Religions, by which are meant the modes of sdivine worship proper to different tribes, nations, or communities, and based on the belief held in common by the members of them severally . . . There is no living religion without something like a doctrine. On the other hand, a doctrine, however elaborate, does not constitute a religion. C. P. Tiele (Encyc. Brit.).
Religion . . . means the conscious relation between man and God, and the expression of that relation in human conduct. J. K^stlin (Schaff-Herzog Encyc.)
After the most straitest sect of our religion I lived a Pharisce. Acts xxvi. 5.
The image of a brute, adorned With gay religions full of pomp and gold. Milton.

2. Specifically, conformity in faith and life to the precepts inculcated in the Bible, respecting the conduct of life and duty toward God and man; the Christian faith and practice.

4. Strictness of fidelity in conforming to any practice, as if it were an enjoined rule of conduct. [R.]
Those parts of pleading which in ancient times might perhaps be

material, but at this time are become only mere styles and forms, are still continued with much religion. Sir M. Hale.

Note: Religion, as distinguished from theology, is subjective, designating the feelings and acts of men which relate to God; while theology is objective, and denotes those ideas which man entertains respecting the God whom he worships, especially his systematized views of God. As distinguished from morality, religion denotes the influences and motives to human duty which are found in the character and will of God, while morality describes the duties to man, to which true religion always influences. As distinguished from piety, religion is a high sense of moral obligation and spirit of reverence or worship which affect the heart of man with respect to the Deity, while piety, which first expressed the feelings of a child toward a parent, is used for that filial sentiment of veneration and love which we owe to the Father of all. As distinguished from sanciti, religion is the means by which sanctity is achieved, sanctity denoting primarily that purity of heart and life which results from habitual communion with God, and a sense of his continual presence.
Natural religion, a religion based upon the evidences of a God and his qualities, which is supplied by natural phenomena. See Natural theology, under Natural.
 -- Religion of humanity, a name sometimes given to a religion founded upon positivism as a philosophical basis.
 -- Revealed religion, that which is based upon direct communication of God's will to mankind; especially, the Christian religion, based on the revelations recorded in the Old and New Testaments.

3. To express in words or writing, as observed or noticed; to state; to say; -- often with a substantive clause; as, he remarked that it was time to go.

Syn.
 -- To observe; notice; heed; regard; note; say.
 -- Remark, Observe, Notice. To observe is to keep or hold a thing distinctly before the mind. To remark is simply to mark or take note of whatever may come up. To notice implies still less continuity of attention. When we turn from these mental states to the expression of them in language, we find the same distinction. An observation is properly the result of somewhat prolonged thought; a remark is usually suggested by some passing occurence; a notice is in most cases something cursory and short. This distinction is not always maintained as to remark and observe, which are often used interchangeably. "Observing men may form many judgments by the rules of similitude and proportion." I. Watts. "He can not distinguish difficult and noble speculations from trifling and vulgar remarks." Collier. "The thing to be regarded, in taking notice of a child's miscarriage, is what root it springs from." Locke.

REMOVE
Re*move" (r-mv"), v. i.

Defn: To change place in any manner, or to make a change in place; to move or go from one residence, position, or place to another.
Till Birnam wood remove to Dunsinane, I can not taint with fear. Shak.

Note: The verb remove, in some of its application, is synonymous with move, but not in all. Thus we do not apply remove to a mere change of posture, without a change of place or the seat of a thing. A man moves his head when he turns it, or his finger when he bends it, but he does not remove it. Remove usually or always denotes a change of place in a body, but we never apply it to a regular, continued course or motion. We never say the wind or water, or a ship, removes at a certain rate by the hour; but we say a ship was removed from one place in a harbor to another. Move is a generic term, including the sense of remove, which is more generally applied to a change from one station or permanent position, stand, or seat, to another station.

Syn.
 -- Anger; irritation; vexation; displeasure; grudge; indignation; choler; gall; ire; wrath; rage; fury.
 -- Resentment, Anger. Anger is the broader term, denoting a keen sense of disapprobation (usually with a desire to punish) for watever we feel to be wrong, whether directed toward ourselves or others. Reseniment is anger exicted by a sense of personal injury. It is, etymologically, that reaction of the mind which we instinctively feel when we think ourselves wronged. Pride and selfishness are apt to aggravate this feeling until it changes into a criminal animosity; and this is now the more common signification of the term. Being founded in a sense of injury, this feeling is hard to be removed; and hence the expressions bitter or implacable resentment. See Anger.
Anger is like A full-hot horse, who being allowed his way, Self-mettle tires him. Shak.
Can heavently minds such high resentment show, Or exercise their spite in human woe Dryden.

Defn: Leaping back; rebounding; recoling.

RESILITION
Res`i*li"tion (rz`-lsh"n), n.

Defn: Resilience. [R.]

RESIN
Res"in (rz"n), n. Etym: [F. rÈsine, L. resina; cf. Gr. "rhti`nh Cf. Rosin.]

Defn: Any one of a class of yellowish brown solid inflammable substances, of vegetable origin, which are nonconductors of electricity, have a vitreous fracture, and are soluble in ether, alcohol, and essential oils, but not in water; specif., pine resin (see Rosin).

Note: Resins exude from trees in combination with essential oils, gums, etc., and in a liquid or semiliquid state. They are composed of carbon, hydrogen, and oxygen, and are supposed to be formed by the oxidation of the essential oils. Copal, mastic, quaiacum, and colophony or pine resin, are some of them. When mixed with gum, they form the gum resins, like asafetida and gamboge; mixed with essential oils, they frorm balsams, or oleoresins. Highgate resin (Min.), a fossil resin resembling copal, occuring in blue clay at Highgate, near London.
-- Resin bush (Bot.), a low composite shrub (Euryops speciosissimus) of South Africa, having smooth pinnately parted leaves and abounding in resin.

RESINACEOUS
Res`in*a"ceous (-"shs), a.

Defn: Having the quality of resin; resinous.

RESINATE
Res"in*ate (rz"n-t), n. (Chem.)

Defn: Any one of the salts the resinic acids.

RESINIC
Re*sin"ic (r-zn"k), a. (Chem.)

Defn: Pertaining to, or obtained from, resin; as, the resinic acids.

RESINIFEROUS
Res`in*if"er*ous (rz`n-f"r-s), a. Etym: [Resin + -ferous: cf. F. rÈsinifËre.]

Defn: Yielding resin; as, a resiniferous tree or vessel.

RESINIFORM
Res"in*i*form (rz"n--frm), a. Etym: [Resin + -form: cf. F. rÈsiniforme.]

Defn: Having the form of resin.

RESINO-ELECTRIC
Res`in*o-e*lec"tric (---lk"trk), a. (Elec.)

Defn: Containing or exhibiting resinous electricity.

RESINOID
Res"in*oid (rz"n-oid), a.

Defn: Somewhat like resin.

RESINOUS
Res"in*ous (-s), a. Etym: [L. resinous: cf. F. rÈsineux. See Resin.]

Defn: Of or pertaining to resin; of the nature of resin; resembling or obtained from resin. Resinous electricity (Elec.), electricity which is exited by rubbing bodies of the resinous kind. See Negative electricity, under Negative.

RESINOUSLY
Res"in*ous*ly, adv.

Defn: By means, or in the manner, of resin.

RESINOUSNESS
Res"in*ous*ness, n.

Defn: The quality of being resinous.

RESINY
Res"in*y (-), a.

Defn: Like resin; resinous.

RESIPISCENCE
Res`i*pis"cence (rs`-ps"sens), n. Etym: [L. resipiscentia, from resipiscere to recover one's senses: cf. F. rÈsipiscence.]

Defn: Wisdom derived from severe experience; hence, repentance. [R.] Bp. Montagu.

Syn.
-- Drive.
-- Ride, Drive. Ride originally meant (and is so used throughout the
English Bible) to be carried on horseback or in a vehicle of any
kind. At present in England, drive is the word applied in most cases
to progress in a carriage; as, a drive around the park, etc.; while
ride is appropriated to progress on a horse. Johnson seems to
sanction this distinction by giving "to travel on horseback" as the
leading sense of ride; though he adds "to travel in a vehicle" as a
secondary sense. This latter use of the word still occurs to some
extent; as, the queen rides to Parliament in her coach of state; to
ride in an omnibus.
"Will you ride over or drive" said Lord Willowby to his quest, after
breakfast that morning. W. Black.

ROMAN CALENDAR
Roman calendar.

Defn: The calendar of the ancient Romans, from which our modern calendars are derived. It is said to have consisted originally of ten months, Martius, Aprilis, Maius, Junius, Quintilis, Sextilis, September, October, November, and December, having a total of 304 days. Numa added two months, Januarius at the beginning of the year, and Februarius at the end, making in all 355 days. He also ordered an intercalary month, Mercedinus, to be inserted every second year. Later the order of the months was changed so that January should come before February. Through abuse of power by the pontiffs to whose care it was committed, this calendar fell into confusion. It was replaced by the Julian calendar. In designating the days of the month, the Romans reckoned backward from three fixed points, the calends, the nones, and the ides. The calends were always the first day of the month. The ides fell on the 15th in March, May, July (Quintilis), and October, and on the 13th in other months. The nones came on the eighth day (the ninth, counting the ides) before the ides. Thus, Jan. 13 was called the ides of January, Jan. 12, the day before the ides, and Jan. 11, the third day before the ides (since the ides count as one), while Jan. 14 was the 19th day before the calends of February.

ROMANCE
Ro*mance", n. Etym: [OE. romance, romant, romaunt, OF. romanz, romans, romant, roman, F. roman, romance, fr. LL. Romanice in the Roman language, in the vulgar tongue, i. e., in the vulgar language which sprang from Latin, the language of the Romans, and hence applied to fictitious compositions written in this vulgar tongue; fr. S

Defn: the nineteenth letter of the English alphabet, is a consonanat, and is often called a sibilant, in allusion to its hissing sound. It has two principal sounds; one a more hissing, as in sack, this; the other a vocal hissing (the same as that of z), as in is, wise. Besides these it sometimes has the sounds of sh and zh, as in sure, measure. It generally has its hissing sound at the beginning of words, but in the middle and at the end of words its sound is determined by usage. In a few words it is silent, as in isle, dÈbris. With the letter h it forms the digraph sh. See Guide to pronunciation, t\'c5 255-261.

Note: Both the form and the name of the letter S are derived from the Latin, which got the letter through the Greek from the PhÊnician. the ultimate origin is Egyptian. S is etymologically most nearly related to c, z, t, and r; as, in ice, OE. is; E. hence, OE. hennes; E. rase, raze; erase, razor; that, G. das; E. reason, F. raison, L. ratio; E. was, were; chair, chaise (see C, Z, T, and R.).

1. Consisting of salt, or containing salt; as, saline particles; saline substances; a saline cathartic.

2. Of the quality of salt; salty; as, a saline taste.

SALINE
Sa"line (or ; 277), n. Etym: [Cf. F. saline. See Saline, a.]

Defn: A salt spring; a place where salt water is collected in the earth.

SALINE
Sal"ine, n.

1. (Chem.)

Defn: A crude potash obtained from beet-root residues and other similar sources. [Written also salin.]

2. (Med. Chem.)

Defn: A metallic salt; esp., a salt of potassium, sodium, lithium, or magnesium, used in medicine.

SALINENESS
Sa*line"ness, n.

Defn: The quality or state of being salt; saltness.

SALINIFEROUS
Sal`i*nif"er*ous, a. Etym: [Saline + -ferous.]

Defn: Same as Saliferous.

SALINIFORM
Sa*lin"i*form, a.

Defn: Having the form or the qualities of a salt, especially of common salt.

SALINITY
Sa*lin"i*ty, n.

Defn: Salineness. Carpenter.

SALINOMETER
Sal`i*nom"e*ter, n. Etym: [Saline + -meter.]

Defn: A salimeter.

SALINOUS
Sa*lin"ous, a.

Defn: Saline. [Obs.]

SALIQUE
Sal"ique (or), a. Etym: [F.]

Defn: Salic. Shak.
She fulmined out her scorn of laws salique. Tennyson.

SALIRETIN
Sal`i*re"tin, n. Etym: [Saligenin + Gr. (Chem.)

Defn: A yellow amorphous resinoid substance obtained by the action of dilute acids on saligenin.

SALISBURIA
Sal`is*bu"ri*a, n. Etym: [Named after R. A. Salisbury, an English botanist.] (Bot.)

Defn: The ginkgo tree (Ginkgo biloba, or Salisburia adiantifolia).

SALITE
Sal"ite, v. t. Etym: [L. salitus, p.p. of salire to salt, fr. sal salt.]

Defn: To season with salt; to salt. [Obs.]

SALITE
Sa"lite, n. Etym: [So called from Sala, a town in Sweden.] (Min.)

Defn: A massive lamellar variety of pyroxene, of a dingy green color. [Written also sahlite.]

SALIVA
Sa*li"va, n. Etym: [L.; cf. Gr. (Physiol.)

Defn: The secretion from the salivary glands.

Note: In man the saliva is a more or less turbid and slighty viscid fluid, generally of an alkaline reaction, and is secreted by the parotid, submaxillary, and sublingual glands. In the mouth the saliva is mixed with the secretion from the buccal glands. The secretions from the individual salivary glands have their own special characteristics, and these are not the same in all animals. In man and many animals mixed saliva, i.e., saliva composed of the secretions of all three of the salivary glands, is an important degestive fluid on account of the presence of the peculiar enzyme, ptyalin.

SALIVAL
Sa*li"val, a.

Defn: Salivary.

SALIVANT
Sal"i*vant, a. Etym: [L. salivans, p.pr. of salivare. See Salivate.]

Defn: Producing salivation.

SALIVANT
Sal"i*vant, n.

Defn: That which produces salivation.

SALIVARY
Sal"i*va*ry, a. Etym: [L. salivarius slimy, clammy: cf. F. salivaire.] (Physiol.)

Defn: Of or pertaining to saliva; producing or carrying saliva; as, the salivary ferment; the salivary glands; the salivary ducts, etc.

SALIVATE
Sal"i*vate, v. t. [imp. & p. p. Salivated; p. pr. & vb. n. Salivating.] Etym: [L. salivatus, p.p. of salivare to salivate. See Saliva.]

Defn: To produce an abnormal flow of saliva in; to produce salivation or ptyalism in, as by the use of mercury. over.; as, salivate over the prospects of high profits from an enterprise.

Note: Probably influenced by the experiments of Pavlov, who trained dogs to salivate at the sound of a bell, by previously ringing the bell immediately prior to feeding them.

SALIVATION
Sal`i*va"tion, n. Etym: [L. salivatio: cf. F. salivation.] (Physiol.)

Defn: The act or process of salivating; an excessive secretion of saliva, often accompained with soreness of the mouth and gums; ptyalism.

Note: It may be induced by direct chemical or mechanical stimulation, as in mastication of some tasteless substance like rubber, or indirectly by some agent which affects the whole system, as mercury compounds.

SALIVOUS
Sa*li"vous, a. Etym: [L. salivosus: cf. F. saliveux.]

Defn: Pertaining to saliva; of the nature of saliva.

SALIX
Sa"lix, n.; pl. Salices. Etym: [L., the willow.] (Bot.)
(a) A genus of trees or shrubs including the willow, osier, and the like, growing usually in wet grounds.

Defn: Sal ammoniac. See under Sal.

SALMIS
Sal`mis", n. Etym: [F.] (Cookery)

Defn: A ragout or partky roasted game stewed with sauce, wine, bread, and condiments suited to provoke appetite.

SALMON
Salm"on, n.; pl. Salmons or (collectively) Salmon. Etym: [OE. saumoun, salmon, F. saumon, fr. L. salmo, salmonis perhaps from salire to leap. Cf. Sally, v.]

1. (Zoöl.)

Defn: Any one of several species of fishes of the genus Salmo and allied genera. The common salmon (Salmo salar) of Northern Europe and Eastern North America, and the California salmon, or quinnat, are the most important species. They are extensively preserved for food. See Quinnat.

Note: The salmons ascend rivers and penetrate to their head streams to spawn. They are remarkably strong fishes, and will even leap over considerable falls which lie in the way of their progress. The common salmon has been known to grow to the weight of seventy-five pounds; more generally it is from fifteen to twenty-five pounds. Young salmon are called parr, peal, smolt, and grilse. Among the true salmons are: Black salmon, or Lake salmon, the namaycush.
 -- Dog salmon, a salmon of Western North America (Oncorhynchus keta).
 -- Humpbacked salmon, a Pacific-coast salmon (Oncorhynchus gorbuscha).
 -- King salmon, the quinnat.
 -- Landlocked salmon, a variety of the common salmon (var. Sebago), long confined in certain lakes in consequence of obstructions that prevented it from returning to the sea. This last is called also dwarf salmon. Among fishes of other families which are locally and erroneously called salmon are: the pike perch, called jack salmon; the spotted, or southern, squeteague; the cabrilla, called kelp salmon; young pollock, called sea salmon; and the California yellowtail.

2. A reddish yellow or orange color, like the flesh of the salmon.
Salmon berry (Bot.), a large red raspberry growing from Alaska to
California, the fruit of the Rubus Nutkanus.
 -- Salmon killer (Zoöl.), a stickleback (Gasterosteus cataphractus)
of Western North America and Northern Asia.
 -- Salmon ladder, salmon stair. See Fish ladder, under Fish.
 -- Salmon peel, a young salmon.
 -- Salmon pipe, a certain device for catching salmon. Crabb.
 -- Salmon trout. (Zoöl.) (a) The European sea trout (Salmo trutta).
It resembles the salmon, but is smaller, and has smaller and more
numerous scales. (b) The American namaycush. (c) A name that is also
applied locally to the adult black spotted trout (Salmo purpuratus),
and to the steel head and other large trout of the Pacific coast.

SALP
Salp, n. (Zoˆl.)

Defn: Any species of Salpa, or of the family SalpidÊ.

SALPA
Sal"pa, n.; pl. L. SalpÊ, E. Salpas. Etym: [NL.: cf. L. salpa a kind of stockfish.] (Zoˆl.)

Defn: A genus of transparent, tubular, free-swimming oceanic tunicates found abundantly in all the warmer latitudes. See Illustration in Appendix.

Note: Each species exists in two distinct forms, one of which lives solitary, and produces, by budding from an internal organ, a series of the other kind. These are united together, side by side, so as to form a chain, or cluster, often of large size. Each of the individuals composing the chain carries a single egg, which develops into the solitary kind.

SALPIAN; SALPID
Sal"pi*an, Sal"pid, n. (Zoˆl.)

Defn: A salpa.

SALPICON
Sal"pi*con, n. Etym: [F. salpicon, Sp. salpicon.]

Defn: Chopped meat, bread, etc., used to stuff legs of veal or other joints; stuffing; farce. Bacon.

SALPINGITIS
Sal`pin*gi"tis, n. Etym: [NL. See Salpinx, and -itis.] (Med.)

Defn: Inflammation of the salpinx.

SALPINX

Sal"pinx, n. Etym: [NL., from Gr. (Old Anat.)

Defn: The Eustachian tube, or the Fallopian tube.

SALSAFY
Sal"sa*fy, n. (Bot.)

Defn: See Salsify.

SALSAMENTARIOUS
Sal`sa*men*ta"ri*ous, a. Etym: [L. salsamentarius, fr. salsamentum brine, pickled fish, fr. salsus salted, p.p. of salire to salt.]

Defn: Salt; salted; saline. [R.]

SALSE
Salse, n. Etym: [F.]

Defn: A mud volcano, the water of which is often impregnated with salts, whence the name.

SALSIFY
Sal"si*fy, n. Etym: [F. salsifis.] (Bot.)

Defn: See Oyster plant (a), under Oyster.

SALSO-ACID
Sal"so-ac`id, a. Etym: [L. salsus salted, salt + acidus acid.]

Defn: Having a taste compounded of saltness and acidity; both salt and acid. [R.]

SALSODA
Sal`so"da, n.

Defn: See Sal soda, under Sal.

SALSOLA
Sal"so*la, n. Etym: [NL., fr. L. salsus salt, because they contain alkaline salts.] (Bot.)

Defn: A genus of plants including the glasswort. See Glasswort.

SALSUGINOUS
sal*su"gi*nous, a. Etym: [L. salsugo, -ginis, saltness from salsus salted, salt: cf. F. salsugineux.] (Bot.)

Defn: Growing in brackish places or in salt marches.

SALT
Salt, n. Etym: [AS. sealt; akin to OS. & OFries. salt, D. zout, G. salz, Icel., Sw., & Dan. salt, L. sal, Gr. sole, Ir. & Gael. salann, W. halen, of unknown origin. Cf. Sal, Salad, Salary, Saline, Sauce, Sausage.]

1. The chloride of sodium, a substance used for seasoning food, for the preservation of meat, etc. It is found native in the earth, and is also produced, by evaporation and crystallization, from sea water and other water impregnated with saline particles.

2. Hence, flavor; taste; savor; smack; seasoning.
Though we are justices and doctors and churchmen . . . we have some salt of our youth in us. Shak.

3. Hence, also, piquancy; wit; sense; as, Attic salt.

I out and bought some things; among others, a dozen of silver salts.

Pepys.

5. A sailor; -- usually qualified by old. [Colloq.]
Around the door are generally to be seen, laughing and gossiping, clusters of old salts. Hawthorne.

6. (Chem.)

Defn: The neutral compound formed by the union of an acid base; thus, sulphuric acid and iron form the salt sulphate of iron or green vitriol.

Note: Except in case of ammonium salts, accurately speaking, it is the acid radical which unites with the base or basic radical, with the elimination of hydrogen, of water, or of analogous compounds as side products. In the case of diacid and triacid bases, and of dibasic and tribasic acids, the mutual neutralization may vary in degree, producing respectively basic, neutral, or acid salts See Phrases below.

7. Fig.: That which preserves from corruption or error; that which purifies; a corrective; an antiseptic; also, an allowance or deduction; as, his statements must be taken with a grain of salt.
Ye are the salt of the earth. Matt. v. 13.

8. pl.

Defn: Any mineral salt used as an aperient or cathartic, especially Epsom salts, Rochelle salt, or Glauber's salt.

9. pl.

Defn: Marches flooded by the tide. [Prov. Eng.] Above the salt, Below the salt, phrases which have survived the old custom, in the houses of people of rank, of placing a large saltcellar near the middle of a long table, the places above which were assigned to the guests of distinction, and those below to dependents, inferiors, and poor relations. See Saltfoot.
His fashion is not to take knowledge of him that is beneath him in clothes. He never drinks below the salt. B. Jonson.
-- Acid salt (Chem.) (a) A salt derived from an acid which has several replaceable hydrogen atoms which are only partially exchanged for metallic atoms or basic radicals; as, acid potassium sulphate is an acid salt. (b) A salt, whatever its constitution, which merely gives an acid reaction; thus, copper sulphate, which is composed of a strong acid united with a weak base, is an acid salt in this sense, though theoretically it is a neutral salt.
-- Alkaline salt (Chem.), a salt which gives an alkaline reaction, as sodium carbonate.
-- Amphid salt (Old Chem.), a salt of the oxy type, formerly regarded as composed of two oxides, an acid and a basic oxide. [Obsolescent] -- Basic salt (Chem.) (a) A salt which contains more of the basic constituent than is required to neutralize the acid. (b) An alkaline salt.
-- Binary salt (Chem.), a salt of the oxy type conveniently regarded as composed of two ingredients (analogously to a haloid salt), viz., a metal and an acid radical.
-- Double salt (Chem.), a salt regarded as formed by the union of two distinct salts, as common alum, potassium aluminium sulphate. See under Double.
-- Epsom salts. See in the Vocabulary.
-- Essential salt (Old Chem.), a salt obtained by crystalizing plant juices.
-- Ethereal salt. (Chem.) See under Ethereal.
-- Glauber's salt or salts. See in Vocabulary.
-- Haloid salt (Chem.), a simple salt of a halogen acid, as sodium chloride.
-- Microcosmic salt. (Chem.). See under Microcosmic.

-- Neutral salt. (Chem.) (a A salt in which the acid and base (in theory) neutralize each other. (b) A salt which gives a neutral reaction.
-- Oxy salt (Chem.), a salt derived from an oxygen acid.
-- Per salt (Old Chem.), a salt supposed to be derived from a peroxide base or analogous compound. [Obs.] -- Permanent salt, a salt which undergoes no change on exposure to the air.
-- Proto salt (Chem.), a salt derived from a protoxide base or analogous compound.
-- Rochelle salt. See under Rochelle.
-- Salt of amber (Old Chem.), succinic acid.
-- Salt of colcothar (Old Chem.), green vitriol, or sulphate of iron.
-- Salt of hartshorn. (Old Chem.) (a) Sal ammoniac, or ammonium chloride. (b) Ammonium carbonate. Cf. Spirit of hartshorn, under Hartshorn.
-- Salt of lemons. (Chem.) See Salt of sorrel, below.
-- Salt of Saturn (Old Chem.), sugar of lead; lead acetate; -- the alchemical of lead being Saturn.
-- Salt of Seignette. Same as Rochelle salt.
-- Salt of soda (Old Chem.), sodium carbonate.
-- Salt of sorrel (Old Chem.), acid potassium oxalate, or potassium quadroxalate, used as a solvent for ink stains; -- so called because found in the sorrel, or Oxalis. Also sometimes inaccurately called salt of lemon.
-- Salt of tartar (Old Chem.), potassium carbonate; -- so called because formerly made by heating cream of tartar, or potassium tartrate. [Obs.] -- Salt of Venus (Old Chem.), blue vitriol; copper sulphate; -- the alchemical name of copper being Venus.
-- Salt of wisdom. See Alembroth.
-- Sedative salt (Old Med. Chem.), boric acid.
-- Sesqui salt (Chem.), a salt derived from a sesquioxide base or analogous compound.
-- Spirit of salt. (Chem.) See under Spirit.
-- Sulpho salt (Chem.), a salt analogous to an oxy salt, but containing sulphur in place of oxygen.

SALT
Salt, a. [Compar. Salter; superl. Saltest.] Etym: [AS. sealt, salt. See Salt, n.]

1. Of or relating to salt; abounding in, or containing, salt; prepared or preserved with, or tasting of, salt; salted; as, salt beef; salt water. "Salt tears." Chaucer.

SCHOONER
Schoon"er, n. Etym: [See the Note below. Cf. Shun.] (Naut.)

Defn: Originally, a small, sharp-built vessel, with two topsails on one or both masts and was called a topsail schooner. About 1840, longer vesels with three masts, fore-and-aft rigged, came into use, and since that time vesels with four masts and even with six masts, so rigged, are built. Schooners with more than two masts are designated three-masted schooners, four-masted schooners, etc. See Illustration in Appendix.

Note: The fist schooner ever constructed is said to have between built in Gloucester, Massachusetts, about theyar 1713, by a Captain Andrew Robinson, and to have received its name from the following trivial circumstance: When the vessel went off the stocks into the water, a bystander cried out,"O, how she scoons!" Robinson replied, " A scooner let her be;" and, from that time, vessels thus masted and rigged have gone by this name. The word scoon is popularly used in some parts of New England to denote the act of making stones skip along the surface of water. The Scottish scon means the same thing. Both words are probably allied to the Icel. skunda, skynda, to make haste, hurry, AS. scunian to avoid, shun, Prov. E. scun. In the New England records, the word appears to have been originally written scooner. Babson, in his "History of Gloucester," gives the following extract from a letter written in that place Sept. 25, 1721, by Dr. Moses Prince, brother of the Rev. Thomas Prince, the annalist of New England: "This gentleman (Captain Robinson) was first contriver of schooners, and built the first of that sort about eight years since."

SCIENCE
Sci"ence, n. Etym: [F., fr. L. scientia, fr. sciens, -entis, p.pr. of
scire to know. Cf. Conscience, Conscious, Nice.]

1. Knowledge; lnowledge of principles and causes; ascertained truth
of facts.
If we conceive God's or science, before the creation, to be extended
to all and every part of the world, seeing everything as it is, . . .
his science or sight from all eternity lays no necessity on anything
to come to pass. Hammond.
Shakespeare's deep and accurate science in mental philosophy.
Coleridge.

2. Accumulated and established knowledge, which has been systematized
and formulated with reference to the discovery of general truths or
the operation of general laws; knowledge classified and made
available in work, life, or the search for truth; comprehensive,
profound, or philosophical knowledge.
All this new science that men lere [teach]. Chaucer.
Science is . . . a complement of cognitions, having, in point of
form, the character of logical perfection, and in point of matter,
the character of real truth. Sir W. Hamilton.

3. Especially, such knowledge when it relates to the physical world and its phenomena, the nature, constitution, and forces of matter, the qualities and function of living tissues, etc.; -- called also natural science, and physical science.
Voltaire hardly left a single corner of the field entirely unexplored in science, poetry, history, philosophy. J. Morley.

4. Any branch or departament of systematized knowledge considered as a distinct field of investigation or object of study; as, the science of astronomy, of chemistry, or of mind.

Note: The ancients reckoned seven sciences, namely, grammar, rhetoric, logic, arithmetic, music, geometry, and astronomy; -- the first three being included in the Trivium, the remaining four in the Quadrivium.
Good sense, which only is the gift of Heaven, And though no science, fairly worth the seven. Pope.

5. Art, skill, or expertness, regarded as the result of knowledge of laws and principles.
His science, coolness, and great strength. G. A. Lawrence.

Note: Science is applied or pure. Applied science is a knowledge of facts, events, or phenomena, as explained, accounted for, or produced, by means of powers, causes, or laws. Pure science is the knowledge of these powers, causes, or laws, considered apart, or as pure from all applications. Both these terms have a similar and special signification when applied to the science of quantity; as, the applied and pure mathematics. Exact science is knowledge so systematized that prediction and verification, by measurement, experiment, observation, etc., are possible. The mathematical and physical sciences are called the exact sciences. Comparative sciences, Inductive sciences. See under Comparative, and Inductive.

Syn.
 -- Literature; art; knowledge.
 -- Science, Literature, Art. Science is literally knowledge, but more usually denotes a systematic and orderly arrangement of knowledge. In a more distinctive sense, science embraces those branches of knowledge of which the subject-matter is either ultimate principles, or facts as explained by principles or laws thus arranged in natural order. The term literature sometimes denotes all compositions not embraced under science, but usually confined to the belles-lettres. [See Literature.] Art is that which depends on practice and skill in performance. "In science, scimus ut sciamus; in art, scimus ut producamus. And, therefore, science and art may be said to be investigations of truth; but one, science, inquires for the sake of knowledge; the other, art, for the sake of production; and hence science is more concerned with the higher truths, art with the lower; and science never is engaged, as art is, in productive application. And the most perfect state of science, therefore, will be the most high and accurate inquiry; the perfection of art will be the most apt and efficient system of rules; art always throwing itself into the form of rules." Karslake.

-- Segmental organs. (a) (Anat.) The embryonic excretory organs of vertebrates, consisting primarily of the segmental tubes and segmental ducts. (b) (Zoˆl.) The tubular excretory organs, a pair of which often occur in each of several segments in annelids. They serve as renal organs, and often, also, as oviducts and sperm ducts. See Illust. under Sipunculacea.
-- Segmental tubes (Anat.), the tubes which primarily open into the segmental duct, some of which become the urinary tubules of the adult.

SEGMENTATION
Seg`men*ta"tion, n.

Defn: The act or process of dividing into segments; specifically (Biol.), a self-division into segments as a result of growth; cell cleavage; cell multiplication; endogenous cell formation.

Segmentation cavity (Biol.), the cavity formed by the arrangement of the cells in segmentation or cleavage of the ovum; the cavity of the blastosphere. In the gastrula stage, the segmentation cavity in which the mesoblast is formed lies between the entoblast and ectoblast. See Illust. of Invagination.
 -- Segmentation nucleus (Biol.), the body formed by fusion of the male and female pronucleus in an impregnated ovum. See the Note under Pronucleus.
 -- Segmentation of the ovum, or Egg cleavage (Biol.), the process by which the embryos of all the higher plants and animals are derived from the germ cell. In the simplest case, that of small ova destitute of food yolk, the ovum or egg divides into two similar halves or segments (blastomeres), each of these again divides into two, and so on, thus giving rise to a mass of cells (mulberry mass, or morula), all equal and similar, from the growth and development of which the future animal is to be formed. This constitutes regular segmentation. Quite frequently, however, the equality and regularity of cleavage is interfered with by the presence of food yolk, from which results unequal segmentation. See Holoblastic, Meroblastic, Alecithal, Centrolecithal, Ectolecithal, and Ovum.
 -- Segmentation sphere (Biol.), the blastosphere, or morula. See Morula.

SELF
Self, n.; pl. Selves (.

1. The individual as the object of his own reflective consciousness; the man viewed by his own cognition as the subject of all his mental phenomena, the agent in his own activities, the subject of his own feelings, and the possessor of capacities and character; a person as a distinct individual; a being regarded as having personality. "Those who liked their real selves." Addison.
A man's self may be the worst fellow to converse with in the world. Pope.
The self, the I, is recognized in every act of intelligence as the subject to which that act belongs. It is I that perceive, I that imagine, I that remember, I that attend, I that compare, I that feel, I that will, I that am conscious. Sir W. Hamilton.

2. Hence, personal interest, or love of private interest; selfishness; as, self is his whole aim.

3. Personification; embodiment. [Poetic.]
She was beauty's self. Thomson.

Note: Self is united to certain personal pronouns and pronominal adjectives to express emphasis or distinction. Thus, for emphasis; I myself will write; I will examine for myself; thou thyself shalt go; thou shalt see for thyself; you yourself shall write; you shall see for yourself; he himself shall write; he shall examine for himself; she herself shall write; she shall examine for herself; the child itself shall be carried; it shall be present itself. It is also used reflexively; as, I abhor myself; thou enrichest thyself; he loves himself; she admires herself; it pleases itself; we walue ourselves; ye hurry yourselves; they see themselves. Himself, herself, themselves, are used in the nominative case, as well as in the objective. "Jesus himself baptized not, but his disciples." John iv. 2.

Note: Self is used in the formation of innumerable compounds, usually of obvious signification, in most of which it denotes either the agent or the object of the action expressed by the word with which it is joined, or the person in behalf of whom it is performed, or the person or thing to, for, or towards whom or which a quality, attribute, or feeling expressed by the following word belongs, is directed, or is exerted, or from which it proceeds; or it denotes the subject of, or object affected by, such action, quality, attribute, feeling, or the like; as, self-abandoning, self-abnegation, self-abhorring, self-absorbed, self-accusing, self-adjusting, self-balanced, self-boasting, self-canceled, self-combating, self-commendation, self-condemned, self-conflict, self-conquest, self-constituted, self-consumed, self-contempt, self-controlled, self-deceiving, self-denying, self-destroyed, self-disclosure, self-display, self-dominion, self-doomed, self-elected, self-evolved, self-exalting, self-excusing, self-exile, self-fed, self-fulfillment, self-governed, self-harming, self-helpless, self-humiliation, self-idolized, self-inflicted, self-improvement, self-instruction, self-invited, self-judging, self-justification, self-loathing, self-loving, self-maintenance, self-mastered, self-nourishment, self-perfect, self-perpetuation, self-pleasing, self-praising, self-preserving, self-questioned, self-relying, self-restraining, self-revelation, self-ruined, self-satisfaction, self-support, self-sustained, self-sustaining, self-tormenting, self-troubling, self-trust, self-tuition, self-upbraiding, self-valuing, self-worshiping, and many others.

Syn.
 -- Selfishness.
 -- Self-love, Selfishness. The term self-love is used in a twofold sense: 1. It denotes that longing for good or for well-being which actuates the breasts of all, entering into and characterizing every special desire. In this sense it has no moral quality, being, from the nature of the case, neither good nor evil. 2. It is applied to a voluntary regard for the gratification of special desires. In this sense it is morally good or bad according as these desires are conformed to duty or opposed to it. Selfishness is always voluntary and always wrong, being that regard to our own interests, gratification, etc., which is sought or indulged at the expense, and to the injury, of others. "So long as self-love does not degenerate into selfishness, it is quite compatible with true benevolence."

Fleming. "Not only is the phrase self-love used as synonymous with the desire of happiness, but it is often confounded with the word selfishness, which certainly, in strict propriety, denotes a very different disposition of mind." Slewart.

SENSATION
Sen*sa"tion, n. Etym: [Cf. F. sensation. See Sensate.]

1. (Physiol.)

Defn: An impression, or the consciousness of an impression, made upon the central nervous organ, through the medium of a sensory or afferent nerve or one of the organs of sense; a feeling, or state of consciousness, whether agreeable or disagreeable, produced either by an external object (stimulus), or by some change in the internal state of the body.
Perception is only a special kind of knowledge, and sensation a special kind of feeling. . . . Knowledge and feeling, perception and sensation, though always coexistent, are always in the inverse ratio of each other. Sir W. Hamilton.

2. A purely spiritual or psychical affection; agreeable or disagreeable feelings occasioned by objects that are not corporeal or material.

3. A state of excited interest or feeling, or that which causes it.
The sensation caused by the appearance of that work is still remembered by many. Brougham.

Syn.
 -- Perception.
 -- Sensation, Perseption. The distinction between these words, when used in mental philosophy, may be thus stated; if I simply smell a

rose, I have a sensation; if I refer that smell to the external object which occasioned it, I have a perception. Thus, the former is mere feeling, without the idea of an object; the latter is the mind's apprehension of some external object as occasioning that feeling. "Sensation properly expresses that change in the state of the mind which is produced by an impression upon an organ of sense (of which change we can conceive the mind to be conscious, without any knowledge of external objects). Perception, on the other hand, expresses the knowledge or the intimations we obtain by means of our sensations concerning the qualities of matter, and consequently involves, in every instance, the notion of externality, or outness, which it is necessary to exclude in order to seize the precise import of the word sensation." Fleming.

SENSATIONAL
Sen*sa"tion*al, a.

1. Of or pertaining to sensation; as, sensational nerves.

2. Of or pertaining to sensationalism, or the doctrine that sensation is the sole origin of knowledge.

2. The practice or methods of sensational writing or speaking; as, the sensationalism of a novel.

SENSATIONALIST
Sen*sa"tion*al*ist, n.

1. (Metaph.)

Defn: An advocate of, or believer in, philosophical sensationalism.

2. One who practices sensational writing or speaking.

SENSE
Sense, n. Etym: [L. sensus, from sentire, sensum, to perceive, to feel, from the same root as E. send; cf. OHG. sin sense, mind, sinnan to go, to journey, G. sinnen to meditate, to think: cf. F. sens. For the change of meaning cf. See, v. t. See Send, and cf. Assent, Consent, Scent, v. t., Sentence, Sentient.]

1. (Physiol.)

Defn: A faculty, possessed by animals, of perceiving external objects by means of impressions made upon certain organs (sensory or sense organs) of the body, or of perceiving changes in the condition of the body; as, the senses of sight, smell, hearing, taste, and touch. See Muscular sense, under Muscular, and Temperature sense, under Temperature.
Let fancy still my sense in Lethe steep. Shak.
What surmounts the reach Of human sense I shall delineate. Milton.
The traitor Sense recalls The soaring soul from rest. Keble.

2. Perception by the sensory organs of the body; sensation;

sensibility; feeling.
In a living creature, though never so great, the sense and the affects of any one part of the body instantly make a transcursion through the whole. Bacon.

3. Perception through the intellect; apprehension; recognition; understanding; discernment; appreciation.
This Basilius, having the quick sense of a lover. Sir P. Sidney.
High disdain from sense of injured merit. Milton.

4. Sound perception and reasoning; correct judgment; good mental capacity; understanding; also, that which is sound, true, or reasonable; rational meaning. "He speaks sense." Shak.
He raves; his words are loose As heaps of sand, and scattering wide from sense. Dryden.

5. That which is felt or is held as a sentiment, view, or opinion; judgment; notion; opinion.
I speak my private but impartial sense With freedom. Roscommon.
The municipal council of the city had ceased to speak the sense of the citizens. Macaulay.

6. Meaning; import; signification; as, the true sense of words or phrases; the sense of a remark.
So they read in the book in the law of God distinctly, and gave the sense. Neh. viii. 8.
I think 't was in another sense. Shak.

7. Moral perception or appreciation.
Some are so hardened in wickedness as to have no sense of the most friendly offices. L' Estrange.

8. (Geom.)

Defn: One of two opposite directions in which a line, surface, or volume, may be supposed to be described by the motion of a point, line, or surface. Common sense, according to Sir W. Hamilton: (a) "The complement of those cognitions or convictions which we receive from nature, which all men possess in common, and by which they test the truth of knowledge and the morality of actions." (b) "The faculty of first principles." These two are the philosophical significations. (c) "Such ordinary complement of intelligence, that,if a person be deficient therein, he is accounted mad or foolish." (d) When the substantive is emphasized: "Native practical intelligence, natural prudence, mother wit, tact in behavior, acuteness in the observation of character, in contrast to habits of acquired learning or of speculation." -- Moral sense. See under Moral, (a).
-- The inner, or internal, sense, capacity of the mind to be aware of its own states; consciousness; reflection. "This source of ideas every man has wholly in himself, and though it be not sense, as having nothing to do with external objects, yet it is very like it, and might properly enough be called internal sense." Locke.
-- Sense capsule (Anat.), one of the cartilaginous or bony cavities which inclose, more or less completely, the organs of smell, sight, and hearing.
-- Sense organ (Physiol.), a specially irritable mechanism by which some one natural force or form of energy is enabled to excite sensory nerves; as the eye, ear, an end bulb or tactile corpuscle, etc.
-- Sense organule (Anat.), one of the modified epithelial cells in or near which the fibers of the sensory nerves terminate.

Syn.
-- Understanding; reason.
-- Sense, Understanding, Reason. Some philosophers have given a technical signification to these terms, which may here be stated. Sense is the mind's acting in the direct cognition either of material objects or of its own mental states. In the first case it is called the outer, in the second the inner, sense. Understanding is the

logical faculty, i. e., the power of apprehending under general conceptions, or the power of classifying, arranging, and making deductions. Reason is the power of apprehending those first or fundamental truths or principles which are the conditions of all real and scientific knowledge, and which control the mind in all its processes of investigation and deduction. These distinctions are given, not as established, but simply because they often occur in writers of the present day.

SENSE
Sense, v. t. [imp. & p. p. Sensed; p. pr. & vb. n. Sensing.]

SENTIMENT
Sen"ti*ment, n. Etym: [OE. sentement, OF. sentement, F. sentiment,
fr. L. sentire to perceive by the senses and mind, to feel, to think.
See Sentient, a.]

1. A thought prompted by passion or feeling; a state of mind in view
of some subject; feeling toward or respecting some person or thing;
disposition prompting to action or expression.
The word sentiment, agreeably to the use made of it by our best
English writers, expresses, in my own opinion very happily, those
complex determinations of the mind which result from the coˆperation
of our rational powers and of our moral feelings. Stewart.
Alike to council or the assembly came, With equal souls and
sentiments the same. Pope.

2. Hence, generally, a decision of the mind formed by deliberation or reasoning; thought; opinion; notion; judgment; as, to express one's sentiments on a subject.
Sentiments of philosophers about the perception of external objects. Reid.
Sentiment, as here and elsewhere employed by Reid in the meaning of opinion (sententia), is not to be imitated. Sir W. Hamilton.

3. A sentence, or passage, considered as the expression of a thought; a maxim; a saying; a toast.

4. Sensibility; feeling; tender susceptibility.
Mr. Hume sometimes employs (after the manner of the French metaphysicians) sentiment as synonymous with feeling; a use of the word quite unprecedented in our tongue. Stewart.
Less of sentiment than sense. Tennyson.

Syn.
 -- Thought; opinion; notion; sensibility; feeling.
 -- Sentiment, Opinion, Feeling. An opinion is an intellectual judgment in respect to any and every kind of truth. Feeling describes those affections of pleasure and pain which spring from the exercise of our sentient and emotional powers. Sentiment (particularly in the plural) lies between them, denoting settled opinions or principles in regard to subjects which interest the feelings strongly, and are presented more or less constantly in practical life. Hence, it is more appropriate to speak of our religious sentiments than opinions, unless we mean to exclude all reference to our feelings. The word sentiment, in the singular, leans ordinarily more to the side of feeling, and denotes a refined sensibility on subjects affecting the heart. "On questions of feeling, taste, observation, or report, we define our sentiments. On questions of science, argument, or metaphysical abstraction, we define our opinions. The sentiments of the heart. The opinions of the mind . . . There is more of instinct in sentiment, and more of definition in opinion. The admiration of a work of art which results from first impressions is classed with our sentiments; and, when we have accounted to ourselves for the approbation, it is classed with our opinions." W. Taylor.

SENTIMENTAL
Sen`ti*men"tal, a. Etym: [Cf. F. sentimental.]

1. Having, expressing, or containing a sentiment or sentiments; abounding with moral reflections; containing a moral reflection; didactic. [Obsoles.]
Nay, ev'n each moral sentimental stroke, Where not the character, but poet, spoke, He lopped, as foreign to his chaste design, Nor spared a useless, though a golden line. Whitehead.

2. Inclined to sentiment; having an excess of sentiment or sensibility; indulging the sensibilities for their own sake; artificially or affectedly tender; -- often in a reproachful sense.
A sentimental mind is rather prone to overwrought feeling and exaggerated tenderness. Whately.

3. Addressed or pleasing to the emotions only, usually to the weaker and the unregulated emotions.

Syn.
 -- Romantic.
 -- Sentimental, Romantic. Sentimental usually describes an error or excess of the sensibilities; romantic, a vice of the imagination. The votary of the former gives indulgence to his sensibilities for the mere luxury of their excitement; the votary of the latter allows his imagination to rove for the pleasure of creating scenes of ideal enjoiment. "Perhaps there is no less danger in works called sentimental. They attack the heart more successfully, because more

cautiously." V. Knox. "I can not but look on an indifferency of mind, as to the good or evil things of this life, as a mere romantic fancy of such who would be thought to be much wiser than they ever were, or could be." Bp. Stillingfleet.

SHALL
Shall, v. i. & auxiliary. [imp. Should.] Etym: [OE. shal, schal, imp. sholde, scholde, AS. scal, sceal, I am obliged, imp. scolde, sceolde, inf. sculan; akin to OS. skulan, pres. skal, imp. skolda, D. zullen, pres. zal, imp. zoude, zou, OHG. solan, scolan, pres. scal, sol. imp. scolta, solta, G. sollen, pres. soll, imp. sollte, Icel. skulu, pres. skal, imp. skyldi, SW. skola, pres. skall, imp. skulle, Dan. skulle, pres. skal, imp. skulde, Goth. skulan, pres. skal, imp. skulda, and to AS. scyld guilt, G. schuld guilt, fault, debt, and perhaps to L. scelus crime.]

Note: [Shall is defective, having no infinitive, imperative, or participle.]

1. To owe; to be under obligation for. [Obs.] "By the faith I shall to God" Court of Love.

2. To be obliged; must. [Obs.] "Me athinketh [I am sorry] that I shall rehearse it her." Chaucer.

3. As an auxiliary, shall indicates a duty or necessity whose obligation is derived from the person speaking; as, you shall go; he shall go; that is, I order or promise your going. It thus ordinarily expresses, in the second and third persons, a command, a threat, or a promise. If the auxillary be emphasized, the command is made more imperative, the promise or that more positive and sure. It is also employed in the language of prophecy; as, "the day shall come when . . . , " since a promise or threat and an authoritative prophecy nearly coincide in significance. In shall with the first person, the necessity of the action is sometimes implied as residing elsewhere than in the speaker; as, I shall suffer; we shall see; and there is always a less distinct and positive assertion of his volition than is indicated by will. "I shall go" implies nearly a simple futurity; more exactly, a foretelling or an expectation of my going, in which, naturally enough, a certain degree of plan or intention may be included; emphasize the shall, and the event is described as certain to occur, and the expression approximates in meaning to our emphatic "I will go." In a question, the relation of speaker and source of obligation is of course transferred to the person addressed; as, "Shall you go" (answer, "I shall go"); "Shall he go" i. e., "Do you require or promise his going" (answer, "He shall go".) The same relation is transferred to either second or third person in such phrases as "You say, or think, you shall go;" "He says, or thinks, he shall go." After a conditional conjunction (as if, whether) shall is used in all persons to express futurity simply; as, if I, you, or he shall say they are right. Should is everywhere used in the same connection and the same senses as shall, as its imperfect. It also expresses duty or moral obligation; as, he should do it whether he will or not. In the early English, and hence in our English Bible, shall is the auxiliary mainly used, in all the persons, to express simple futurity. (Cf. Will, v. t.) Shall may be used elliptically; thus, with an adverb or other word expressive of motion go may be omitted. "He to England shall along with you." Shak.

Note: Shall and will are often confounded by inaccurate speakers and writers. Say: I shall be glad to see you. Shall I do this Shall I help you (not Will I do this) See Will.

SHALLI
Shal"li, n.
